EDUCATION

B.E. Computer Science & Engineering

Mailam Engineering College,
Tamil Nadu

Expected Graduation: 2029
(2nd Year)

CORE STRENGTHS

- Python Programming
- Backend Development
- API Development
- Logical Problem Solving
- Software Architecture
- Product-Oriented Development

GURUPRASATH D

Python Developer | Backend Developer | Computer Science Student

Computer Science and Engineering student with a strong interest in Python and backend development. Hands-on knowledge of Python, Flask, Node.js, Express.js, and foundational programming languages. Passionate about building backend systems, APIs, server-side applications, and real-time software. Founder and CEO of GOAT'ECH, experienced in exploring software product development and technology initiatives.

PROFESSIONAL EXPERIENCE

Founder & CEO

GOAT'ECH (GOAT TECHNOLOGY)

About GOAT'ECH: A technology-focused initiative driving digital product development, specializing in scalable backend systems, real-world application concepts, and innovative software architecture.

- Founded and actively lead GOAT'ECH, a technology-focused initiative working on software and digital product development.
- Participate in technical planning, backend development, product architecture, and end-to-end software development activities.
- Explore backend technologies and application architectures for practical software products.
- Work with modern programming and web technologies to develop and experiment with real-world applications.
- Manage technical direction, oversee project milestones, and coordinate software development activities.

TECHNICAL SKILLS

Backend Development

Python, Flask, Node.js, Express.js, REST API Development, Server-Side Programming

Web Technologies

HTML, CSS, Full-Stack Concepts

Programming Languages

Python, JavaScript, Java, C, C++

Libraries & Tools

NumPy, Git, GitHub

DEVELOPED PROJECTS

TN Voting

Technologies used: HTML, CSS, JavaScript, Firebase / Firestore

- Engineered a web-based voting application concept designed to facilitate secure and accessible online voting.
- Integrated Firebase and Firestore for real-time database management and seamless, reliable vote recording.

Smart Aqua Map

Technologies used: JavaScript, Leaflet, Firebase

- Developed an interactive water-resource map application providing location-based intelligence and visualizations.
- Implemented mapping features to display state, district, and taluk-level information alongside real-time water-quality data.

C.A.S.E (Police Record Management)

Technologies used: Database Storage, Face Scanning Integration, Search Algorithms

- Conceptualized a secure police-record management application for streamlined law enforcement operations.
- Designed architecture involving comprehensive records management, advanced search capabilities, and face scanning integration.

GOATmedi Pro / MediBook Pro

Technologies used: React, Node.js, PostgreSQL, MongoDB, Firebase, Socket.io

- Architecting a comprehensive clinic and hospital appointment management platform.
- Planning a robust tech stack for real-time communication, scalable database management, and seamless patient-doctor interactions.

Water Can Service Platform

Technologies used: Razorpay API, Payment Integration, Backend Reporting

- Building an online water-can ordering system with dynamic subscription models (daily, weekly, monthly).
- Implementing automatic order confirmations, usage reports, and secure payment processing via Razorpay.

** Continually developing software products and real-world application concepts under the GOAT'ECH initiative.*

CAREER INTERESTS

Actively seeking opportunities and projects as a **Python Developer, Backend Developer, Software Developer, or Full-Stack Developer** to leverage technical skills in a dynamic software engineering environment.
